Contents

1	Copyright	9
2	Introduction	11
2.1	Getting Lisp	11
2.2	Getting EMACS and SLIME	12
2.3	Using the Library	12
3	The Sigma/Behave Package	13
3.1	Macros	13
3.1.1	The Behavior Macro	13
3.1.2	The Spec Macro	14
3.1.3	The Should Macro	14
3.1.4	The Should-Not Macro	15
3.1.5	The Should-Be-Null Macro	15
3.1.6	The Should-Be-True Macro	15
3.1.7	The Should-Be-False Macro	15
3.1.8	The Should-Be-A Macro	16
3.1.9	The Should= Macro	16
3.1.10	The Should-Not= Macro	16
3.1.11	The Should/= Macro	17
3.1.12	The Should-Not/= Macro	17
3.1.13	The Should< Macro	17
3.1.14	The Should-Not< Macro	17
3.1.15	The Should> Macro	18
3.1.16	The Should-Not> Macro	18
3.1.17	The Should<= Macro	18
3.1.18	The Should-Not<= Macro	19
3.1.19	The Should>= Macro	19
3.1.20	The Should-Not>= Macro	19
3.1.21	The Should-Eq Macro	19
3.1.22	The Should-Not-Eq Macro	20
3.1.23	The Should-Eql Macro	20
3.1.24	The Should-Not-Eql Macro	20
3.1.25	The Should-Equal Macro	21

3.1.26	The Should-Not-Equal Macro	21
3.1.27	The Should-EqualP Macro	21
3.1.28	The Should-Not-EqualP Macro	22
3.1.29	The Should-String= Macro	22
3.1.30	The Should-Not-String= Macro	22
3.1.31	The Should-String/= Macro	22
3.1.32	The Should-Not-String/= Macro	23
3.1.33	The Should-String< Macro	23
3.1.34	The Should-Not-String< Macro	23
3.1.35	The Should-String> Macro	24
3.1.36	The Should-Not-String> Macro	24
3.1.37	The Should-String<= Macro	24
3.1.38	The Should-Not-String<= Macro	25
3.1.39	The Should-String>= Macro	25
3.1.40	The Should-Not-String>= Macro	25
3.1.41	The Should-String-Equal Macro	26
3.1.42	The Should-Not-String-Equal Macro	26
3.1.43	The Should-String-Not-Equal Macro	26
3.1.44	The Should-Not-String-Not-Equal Macro	26
3.1.45	The Should-String-LessP Macro	27
3.1.46	The Should-Not-String-LessP Macro	27
3.1.47	The Should-String-GreaterP Macro	27
3.1.48	The Should-Not-String-GreaterP Macro	28
3.1.49	The Should-String-Not-GreaterP Macro	28
3.1.50	The Should-Not-String-Not-GreaterP Macro	28
3.1.51	The Should-String-Not-LessP Macro	29
3.1.52	The Should-Not-String-Not-LessP Macro	29
4	The Sigma/Control Package	31
4.1	Macros	31
4.1.1	The AIf Macro	31
4.1.2	The A?If Macro	32
4.1.3	The AAnd Macro	32
4.1.4	The A?And Macro	32
4.1.5	The ALambda Macro	33
4.1.6	The A?Lambda Macro	33
4.1.7	The ABlock Macro	33
4.1.8	The A?Block Macro	34
4.1.9	The ACond Macro	34
4.1.10	The A?Cond Macro	34
4.1.11	The AWhen Macro	35
4.1.12	The A?When Macro	35
4.1.13	The AWhile Macro	35
4.1.14	The A?While Macro	35
4.1.15	The DeleteF Macro	35
4.1.16	The Do-While Macro	35

4.1.17	The Do-Until Macro	35
4.1.18	The For Macro	35
4.1.19	The Forever Macro	35
4.1.20	The Multicond Macro	35
4.1.21	The OpF Macro	35
4.1.22	The Swap Macro	35
4.1.23	The Swap-Unless Macro	35
4.1.24	The Swap-When Macro	35
4.1.25	The Until Macro	35
4.1.26	The While Macro	35
4.2	Functions	35
4.2.1	The Compose Function	35
4.2.2	The Conjoin Function	35
4.2.3	The Curry Function	35
4.2.4	The Disjoin Function	35
4.2.5	The Function-Alias Function	35
4.2.6	The Operator-To-Function Function	35
4.2.7	The RCompose Function	35
4.2.8	The RCurry Function	35
4.2.9	The Unimplemented Function	35
4.3	Generics	35
4.3.1	The Duplicate Generic	35
5	The Hash Package	37
5.1	Functions	37
5.1.1	The IncHash Function	37
5.1.2	The DecHash Function	37
6	The Numeric Package	39
6.1	Macros	39
6.1.1	The DivF Macro	39
6.1.2	The MultF Macro	39
6.2	Functions	39
6.2.1	The Bit? Function	39
6.2.2	The Choose Function	39
6.2.3	The Factorial Function	39
6.2.4	The Fractional-Part Function	40
6.2.5	The Fractional-Value Function	40
6.2.6	The Integer-Range Function	40
6.2.7	The Nonnegative? Function	40
6.2.8	The Nonnegative-Integer? Function	40
6.2.9	The Positive-Integer? Function	40
6.2.10	The Product Function	40
6.2.11	The Sum Function	40
6.2.12	The Unsigned-Integer? Function	40
6.3	Types	40

6.3.1	The Nonnegative-Float Type	40
6.3.2	The Nonnegative-Integer Type	40
6.3.3	The Positive-Float Type	40
6.3.4	The Positive-Integer Type	40
7	The OS Package	41
7.1	Functions	41
7.1.1	The Perl Function	41
7.1.2	The Python Function	41
7.1.3	The Read-File Function	41
7.1.4	The Read-Lines Function	41
7.1.5	The Ruby Function	41
7.2	Parameters	41
7.2.1	The *Perl-Path* Parameter	41
7.2.2	The *Python-Path* Parameter	41
7.2.3	The *Ruby-Path* Parameter	41
8	The Probability Package	43
8.1	Macros	43
8.1.1	The Decaying-Probabiliity? Macro	43
8.2	Functions	43
8.2.1	The Probability? Function	43
8.3	Types	43
8.3.1	The Probability Type	43
9	The Random Package	45
9.1	Macros	45
9.1.1	The NShuffle Macro	45
9.2	Functions	45
9.2.1	The Gauss Function	45
9.2.2	The Random-Argument Function	45
9.2.3	The Coin-Toss Function	45
9.2.4	The Random-In-Range Function	45
9.2.5	The Random-In-Ranges Function	45
9.2.6	The Random-Range Function	45
9.2.7	The Randomize-Array Function	45
9.2.8	The Random-Array Function	45
9.3	Generics	45
9.3.1	The Random-Element Generic	45
9.3.2	The Shuffle Generic	45
10	The Sequence Package	47
10.1	Macros	48
10.1.1	The Arefable? Macro	48
10.1.2	The NConcF Macro	48
10.1.3	The Nthable? Macro	48

10.1.4	The <code>Set-NthCdr</code> Macro	48
10.2	Functions	48
10.2.1	The <code>Array-Values</code> Function	48
10.2.2	The <code>Nth-From-End</code> Function	48
10.2.3	The <code>Sequence?</code> Function	48
10.2.4	The <code>Empty-Sequence?</code> Function	48
10.2.5	The <code>Join-Symbol-To-All-Following</code> Function	48
10.2.6	The <code>Join-Symbol-To-All-Preceding</code> Function	48
10.2.7	The <code>List-To-Vector</code> Function	48
10.2.8	The <code>Set-Equal</code> Function	48
10.2.9	The <code>Simple-Vector-To-List</code> Function	48
10.2.10	The <code>Sort-Order</code> Function	48
10.2.11	The <code>The-Last</code> Function	48
10.2.12	The <code>Vector-To-List</code> Function	48
10.3	Generics	48
10.3.1	The <code>Best</code> Generic	48
10.3.2	The <code>Minimum</code> Generic	48
10.3.3	The <code>Minimum?</code> Generic	48
10.3.4	The <code>Maximum</code> Generic	48
10.3.5	The <code>Maximum?</code> Generic	48
10.3.6	The <code>Sort-On</code> Generic	48
10.3.7	The <code>Slice</code> Generic	48
10.3.8	The <code>Split</code> Generic	48
10.3.9	The <code>Worst</code> Generic	48
11	The String Package	49
11.1	Functions	49
11.1.1	The <code>Character-Range</code> Function	49
11.1.2	The <code>Character-Ranges</code> Function	49
11.1.3	The <code>Escape-Tildes</code> Function	50
11.1.4	The <code>Replace-Char</code> Function	50
11.1.5	The <code>StrCat</code> Function	50
11.1.6	The <code>StrMult</code> Function	50
11.1.7	The <code>String-Join</code> Function	50
11.1.8	The <code>Stringify</code> Function	50
11.1.9	The <code>To-String</code> Function	50
11.2	Methods	50
11.2.1	The <code>Split</code> Methods	50
12	The Time-Series Package	51
12.1	Macros	51
12.1.1	The <code>Snap-Index</code> Macro	51
12.2	Functions	51
12.2.1	The <code>Array-Raster-Line</code> Function	51
12.2.2	The <code>Distance</code> Function	51
12.2.3	The <code>Norm</code> Function	51

12.2.4	The Raster-Line Function	51
12.2.5	The Similar-Points? Function	51
12.2.6	The Time-Series? Function	51
12.2.7	The Time-Multiseries? Function	51
12.2.8	The TMSref Function	51
12.2.9	The TMS-Dimensions Function	51
12.2.10	The TMS-Raster-Line Function	51
12.2.11	The TMS-Values Function	51
12.3	Types	51
12.3.1	The Time-Multiseries Type	51
13	The Truth Package	53
13.1	Functions	53
13.1.1	The [?] Function	53
13.1.2	The Toggle Function	53
13.2	Generics	53
13.2.1	The ? Generic	53
14	The Sigma Package	55
14.1	Variables	55
14.1.1	The *Sigma-Packages* Variable	55
14.2	Functions	55
14.2.1	The Use-All-Sigma Function	55

Chapter 2

Introduction

The Σ library is a generic library of mostly random useful code for ANSI Common Lisp. It is currently only really focused on SBCL, but patches to add support for other systems are more than welcome.

This library started out as a single file, `utilities.lisp`, that I personally used for shared generic code for all of my Lisp code. Most lispers have a similar file of some name, `utilities.lisp`, `misc.lisp`, `shared.lisp`, or even `stuff.lisp`, that is just a random collection of useful little generic macros and functions. Mine has grown over the years, and in 2012 I decided that I should try to make it useful to people other than myself.

You can download the library from GitHub at:

<https://github.com/cgore/sigma>

and I have some other information on it at my own website at:

<http://cgore.com/programming/lisp/sigma/>

2.1 Getting Lisp

Before using this library you need a working Lisp. I use and recommend SBCL, Steel Bank Common Lisp, which is available at:

<http://www.sbcl.org>

This is derived from CMUCL, Carnegie Mellon University Common Lisp, which is still under active development and is: available at:

<http://www.cons.org/cmucl/>

SBCL has information on getting started at:

<http://www.sbcl.org/getting.html>

If you are using Debian or a similar Linux distribution (including Ubuntu), you can just run as root:

```
apt-get install sbcl sbcl-doc sbcl-source
```

2.2 Getting Emacs and Slime

After installing, the best way to interact with any Common Lisp is via SLIME, the Superior Lisp Interaction Mode for EMACS, which is available at:

<http://common-lisp.net/project/slime/>

This can be installed on Debian by:

```
apt-get install slime emacs emacs-goodies-el
```

2.3 Using the Library

First we need to clone the utilities.

```
mkdir -p /programming/lisp
cd /programming/lisp
git clone git@github.com:cgore/sigma.git
```

Now we need to make a directory for our project and symlink to the ASDF definition. There are other ways to load ASDF libraries, especially if you want to have them available globally; I strongly recommend you read the documentation to ASDF.

```
mkdir our-new-project
cd our-new-project
ln -s /programming/lisp/sigma/sigma.asd
```

Now we need to start up our Lisp REPL. The best way to do this for perfonal use is SLIME from within Emacs, but I will demonstrate using the shell itself here.

```
sbcl
```

Now we are in SBCL.

```
(require :asdf) ; Require ASDF
(require :sigma) ; Require the system via ASDF.
(sigma:use-all-sigma) ; This will pollute COMMON-LISP-USER
(sum (loop for i from 1 to 100 collect i)) ; Returns 5050 and makes
Euler sad.
```

Have fun!

Chapter 3

The Sigma/Behave Package

The `sigma/behave` package contains some useful code for confirming behavior of code, supporting a very basic form of *behavior-driven development*, BDD. The basic flow is to define the *behavior* of something, with multiple *specs* specified within that behavior specification, each consisting of various assertions, such as `should=`, `should-equal`, `should-not-equal`, and many others. If the behavior of the thing doesn't match the specified behavior, then there is some error.

3.1 Macros

3.1.1 The Behavior Macro

The `behavior` macro is used to specify a block of expected behavior for a `thing`. It specifies an example group, loosely similar to the `describe` blocks in Ruby's RSpec. It takes a single argument, the `thing` we are trying to describe, and then a body of code to evaluate that is evaluated in an implicit `progn`. It is to be used around a set of examples, or around a set of assertions directly.

Syntax

```
(behavior thing &body body)
```

Examples

```
(behavior 'float
  (spec "is an Abelian group"
    (let ((a (random 10.0))
          (b (random 10.0))
          (c (random 10.0))
          (e 1.0))
      (spec "closure"
        (should-be-a 'float (* a b)))
```

```

(spec "associativity"
  (should= (* (* a b) c)
            (* a (* b c))))
(spec "identity element"
  (should= a (* e a)))
(spec "inverse element"
  (let ((1/a (/ 1 a)))
    (should= (* 1/a a)
              (* a 1/a)
              1.0)))
(spec "commutativity"
  (should= (* a b) (* b a))))

```

3.1.2 The Spec Macro

The `spec` macro is used to indicate a specification for a desired behavior. It will normally serve as a grouping for assertions or nested `specs`.

Syntax

```
(spec description &body body)
```

Examples

```

(spec "should pass some tests"
  (should= 12 (foo 3.5))
  (should= 14 (foo 4.22)))

```

3.1.3 The Should Macro

The `should` macro is the basic building block for most of the behavior checking. It asserts that `test` returns truthfully for the arguments. Typically you will want to use one of the macros defined on top of `should` instead of using it directly, such as `should=`.

Syntax

```
(should test &rest arguments)
```

Examples

```

(should #'= 12 (* 3 4)) ; Passes
(should #'< 4 (* 2 3)) ; Passes
(should #'< 4 5 6 7)   ; Passes

```

3.1.4 The Should-Not Macro

The `should-not` macro is identical to the `should` macro, except that it inverts the result of the call with `not`.

Syntax

```
(should-not test &rest arguments)
```

Examples

```
(should-not #'< 12 4) ; Passes  
(should-not #'= 12 44) ; Passes
```

3.1.5 The Should-Be-Null Macro

The `should-be-null` macro is a short-hand method for `(should #'null ...)`.

Syntax

```
(should-be-null &rest arguments)
```

Examples

```
(should-be-null ()) ; Passes  
(should-be-null nil) ; Passes  
(should-be-null (not 12)) ; Passes  
(should-be-null (and t t nil)) ; Passes
```

3.1.6 The Should-Be-True Macro

The `should-be-true` macro is a short-hand method for `(should #'identity ...)`.

Syntax

```
(should-be-true &rest arguments)
```

Examples

```
(should-be-true t) ; Passes  
(should-be-true (not nil)) ; Passes  
(should-be-true (or nil nil 12)) ; Passes
```

3.1.7 The Should-Be-False Macro

The `should-be-false` macro is a short-hand method for `(should #'not ...)`.

Syntax

```
(should-be-false &rest arguments)
```

Examples

```
(should-be-false nil)
(should-be-false (not t))
(should-be-false (< 44 2))
```

3.1.8 The Should-Be-A Macro

The `should-be-a` macro specifies that one or more **things** should be of the type specified by **type**.

```
(should-be-a 'integer 1)           ; Passes
(should-be-a 'float 1)             ; Passes
(should-be-a 'integer 1 2 3 4 5 6 7 8 9) ; Passes
(should-be-a 'integer 1.0)         ; Fails
```

3.1.9 The Should= Macro

The `should=` macro is a short-hand method for `(should #'= ...)`.

Syntax

```
(should= &rest arguments)
```

Examples

```
(should= 12 12)    ; Passes
(should= 12 12.0)  ; Passes
```

3.1.10 The Should-Not= Macro

The `should-not=` macro is a short-hand method for `(should-not #'= ...)`.

Syntax

```
(should-not= &rest arguments)
```

Examples

```
(should-not= 12 12)    ; Fails
(should-not= 12 12.0)  ; Fails
(should-not= 12 14)    ; Passes
```

3.1.11 The Should/= Macro

The `should/=` macro is a short-hand method for `(should #'/= ...)`.

Syntax

```
(should/= &rest arguments)
```

Examples

```
(should/= 12 13) ; Passes  
(should/= 12 12) ; Fails  
(should/= 12 12.0) ; Fails
```

3.1.12 The Should-Not/= Macro

The `should-not/=` macro is a short-hand method for `(should-not #'/= ...)`.

Syntax

```
(should-not/= &rest arguments)
```

Examples

```
(should-not/= 12 13) ; Fails  
(should-not/= 12 12) ; Passes  
(should-not/= 12 12.0) ; Passes
```

3.1.13 The Should< Macro

The `should<` macro is a short-hand method for `(should #'< ...)`.

Syntax

```
(should< &rest arguments)
```

Examples

```
(should< 12 13) ; Passes  
(should< 13 12) ; Fails  
(should< 12 12) ; Fails
```

3.1.14 The Should-Not< Macro

The `should-not<` macro is a short-hand method for `(should-not #'< ...)`.

Syntax

```
(should-not< &rest arguments)
```

Examples

```
(should-not< 12 13) ; Passes
(should-not< 13 12) ; Fails
(should-not< 12 12) ; Fails
```

3.1.15 The Should> Macro

The `should<` macro is a short-hand method for `(should #'> ...)`.

Syntax

```
(should> &rest arguments)
```

Examples

```
(should> 12 13) ; Fails
(should> 13 12) ; Passes
(should> 12 12) ; Fails
```

3.1.16 The Should-Not> Macro

The `should-not<` macro is a short-hand method for `(should-not #'> ...)`.

Syntax

```
(should-not> &rest arguments)
```

Examples

```
(should-not> 12 13) ; Passes
(should-not> 13 12) ; Fails
(should-not> 12 12) ; Passes
```

3.1.17 The Should<= Macro

The `should<=` macro is a short-hand method for `(should #'<= ...)`.

Syntax

```
(should<= &rest arguments)
```

Examples

```
(should<= 12 13) ; Passes
(should<= 13 12) ; Fails
(should<= 12 12) ; Passes
```

3.1.18 The Should-Not<= Macro

The `should-not<=` macro is a short-hand method for `(should-not #'<= ...)`.

Syntax

```
(should-not<= &rest arguments)
```

Examples

```
(should-not<= 12 13) ; Fails  
(should-not<= 13 12) ; Passes  
(should-not<= 12 12) ; Fails
```

3.1.19 The Should>= Macro

The `should>=` macro is a short-hand method for `(should #'>= ...)`.

Syntax

```
(should>= &rest arguments)
```

Examples

```
(should>= 12 13) ; Fails  
(should>= 13 12) ; Passes  
(should>= 12 12) ; Passes
```

3.1.20 The Should-Not>= Macro

The `should-not>=` macro is a short-hand method for `(should-not #'>= ...)`.

Syntax

```
(should-not>= &rest arguments)
```

Examples

```
(should-not>= 12 13) ; Passes  
(should-not>= 13 12) ; Fails  
(should-not>= 12 12) ; Fails
```

3.1.21 The Should-Eq Macro

The `should-eq` macro is a short-hand method for `(should #'eq ...)`.

Syntax

```
(should-eq &rest arguments)
```

Examples

```
(should-eq 12 12)           ; Probably passes
(should-eq 13 12)           ; Fails
(should-eq "foo" "foo") ; May pass, may fail.
```

3.1.22 The Should-Not-Eq Macro

The `should-not-eq` macro is a short-hand method for `(should-not #'eq ...)`.

Syntax

```
(should-not-eq &rest arguments)
```

Examples

```
(should-not-eq 12 12)       ; Probably fails
(should-not-eq 13 12)       ; Passes
(should-not-eq "foo" "foo") ; May pass, may fail.
```

3.1.23 The Should-Eql Macro

The `should-eql` macro is a short-hand method for `(should #'eql ...)`.

Syntax

```
(should-eql &rest arguments)
```

Examples

```
(should-eql 12 12)         ; Passes
(should-eql 13 12)         ; Fails
(should-eql "foo" "foo") ; May pass, may fail.
```

3.1.24 The Should-Not-Eql Macro

The `should-not-eql` macro is a short-hand method for `(should-not #'eql ...)`.

Syntax

```
(should-not-eql &rest arguments)
```

Examples

```
(should-not-eql 12 12)      ; Fails
(should-not-eql 13 12)      ; Passes
(should-not-eql "foo" "foo") ; May pass, may fail.
```

3.1.25 The Should-Equal Macro

The `should-equal` macro is a short-hand method for `(should #'equal ...)`.

Syntax

```
(should-equal &rest arguments)
```

Examples

```
(should-equal 12 12)          ; Passes
(should-equal 13 12)          ; Fails
(should-equal "foo" "foo")    ; Passes
(should-equal "FOO" "foo")    ; Fails
```

3.1.26 The Should-Not-Equal Macro

The `should-not-equal` macro is a short-hand method for `(should-not #'equal ...)`.

Syntax

```
(should-not-equal &rest arguments)
```

Examples

```
(should-not-equal 12 12)      ; Passes
(should-not-equal 13 12)      ; Fails
(should-not-equal "foo" "foo") ; Fails
(should-not-equal "FOO" "foo") ; Passes
```

3.1.27 The Should-EqualP Macro

The `should-equalp` macro is a short-hand method for `(should #'equalp ...)`.

Syntax

```
(should-equalp &rest arguments)
```

Examples

```
(should-equalp 12 12)          ; Passes
(should-equalp 13 12)          ; Fails
(should-equalp "foo" "foo")    ; Passes
(should-equalp "FOO" "foo")    ; Passes
```

3.1.28 The Should-Not-EqualP Macro

The `should-not-equalp` macro is a short-hand method for `(should-not #'equalp ...)`.

Syntax

```
(should-not-equalp &rest arguments)
```

Examples

```
(should-not-equalp 12 12)      ; Passes
(should-not-equalp 13 12)      ; Fails
(should-not-equalp "foo" "foo") ; Passes
(should-not-equalp "FOO" "foo") ; Fails
```

3.1.29 The Should-String= Macro

The `should-string=` macro is a short-hand method for `(should #'string= ...)`.

Syntax

```
(should-string= &rest arguments)
```

Examples

```
(should-string= "foo" "foo") ; Passes
(should-string= "FOO" "foo") ; Fails
```

3.1.30 The Should-Not-String= Macro

The `should-not-string=` macro is a short-hand method for `(should-not #'string= ...)`.

Syntax

```
(should-not-string= &rest arguments)
```

Examples

```
(should-not-string= "foo" "foo") ; Fails
(should-not-string= "FOO" "foo") ; Passes
```

3.1.31 The Should-String/= Macro

The `should-string/=` macro is a short-hand method for `(should #'string/= ...)`.

Syntax

```
(should-string/= &rest arguments)
```

Examples

```
(should-string/= "foo" "foo") ; Fails  
(should-string/= "FOO" "foo") ; Passes
```

3.1.32 The Should-Not-String/= Macro

The `should-not-string/=` macro is a short-hand method for `(should-not #'string/= ...)`.

Syntax

```
(should-not-string/= &rest arguments)
```

Examples

```
(should-not-string/= "foo" "foo") ; Passes  
(should-not-string/= "FOO" "foo") ; Fails
```

3.1.33 The Should-String< Macro

The `should-string<` macro is a short-hand method for `(should #'string< ...)`.

Syntax

```
(should-string< &rest arguments)
```

Examples

```
(should-string< "foo" "f") ; Fails  
(should-string< "foo" "foo") ; Fails  
(should-string< "foo" "FOOBAR") ; Fails  
(should-string< "foo" "foobar") ; Passes
```

3.1.34 The Should-Not-String< Macro

The `should-not-string<` macro is a short-hand method for `(should-not #'string< ...)`.

Syntax

```
(should-not-string< &rest arguments)
```

Examples

```
(should-not-string< "foo" "f")      ; Passes
(should-not-string< "foo" "foo")    ; Passes
(should-not-string< "foo" "foobar") ; Fails
```

3.1.35 The Should-String> Macro

The `should-string>` macro is a short-hand method for `(should #'string> ...)`.

Syntax

```
(should-string> &rest arguments)
```

Examples

```
(should-string> "foo" "f")      ; Passes
(should-string> "foo" "foo")    ; Fails
(should-string> "foo" "FOO")    ; Passes
(should-string> "foo" "foobar") ; Fails
```

3.1.36 The Should-Not-String> Macro

The `should-not-string>` macro is a short-hand method for `(should-not #'string> ...)`.

Syntax

```
(should-not-string> &rest arguments)
```

Examples

```
(should-not-string> "foo" "f")      ; Fails
(should-not-string> "foo" "foo")    ; Passes
(should-not-string> "foo" "foobar") ; Passes
```

3.1.37 The Should-String<= Macro

The `should-string<=` macro is a short-hand method for `(should #'string<= ...)`.

Syntax

```
(should-string<= &rest arguments)
```

Examples

```
(should-string<= "foo" "f")      ; Fails
(should-string<= "foo" "foo")    ; Passes
(should-string<= "foo" "foobar") ; Passes
```

3.1.38 The Should-Not-String<= Macro

The `should-not-string<=` macro is a short-hand method for `(should-not #'string<= ...)`.

Syntax

```
(should-not-string<= &rest arguments)
```

Examples

```
(should-not-string<= "foo" "f")      ; Passes
(should-not-string<= "foo" "foo")    ; Fails
(should-not-string<= "foo" "foobar") ; Fails
```

3.1.39 The Should-String>= Macro

The `should-string>=` macro is a short-hand method for `(should #'string>= ...)`.

Syntax

```
(should-string>= &rest arguments)
```

Examples

```
(should-string>= "foo" "f")      ; Passes
(should-string>= "foo" "foo")    ; Passes
(should-string>= "foo" "foobar") ; Fails
```

3.1.40 The Should-Not-String>= Macro

The `should-not-string>=` macro is a short-hand method for `(should-not #'string>= ...)`.

Syntax

```
(should-not-string>= &rest arguments)
```

Examples

```
(should-not-string>= "foo" "f")      ; Fails
(should-not-string>= "foo" "foo")    ; Fails
(should-not-string>= "foo" "foobar") ; Passes
```

3.1.41 The Should-String-Equal Macro

The `should-string-equal` macro is a short-hand method for `(should #'string-equal ...)`.

Syntax

```
(should-string-equal &rest arguments)
```

Examples

```
(should-string-equal "foo" "foo")      ; Passes  
(should-string-equal "FOO" "foo")      ; Passes  
(should-string-equal "foo" "foobar") ; Fails
```

3.1.42 The Should-Not-String-Equal Macro

The `should-not-string-equal` macro is a short-hand method for `(should-not #'string-equal ...)`.

Syntax

```
(should-not-string-equal &rest arguments)
```

Examples

```
(should-not-string-equal "foo" "foo")    ; Fails  
(should-not-string-equal "FOO" "foo")    ; Fails  
(should-not-string-equal "foo" "foobar") ; Passes
```

3.1.43 The Should-String-Not-Equal Macro

The `should-string-not-equal` macro is a short-hand method for `(should #'string-not-equal ...)`.

Syntax

```
(should-string-not-equal &rest arguments)
```

Examples

```
(should-string-not-equal "foo" "foo")    ; Fails  
(should-string-not-equal "FOO" "foo")    ; Fails  
(should-string-not-equal "foo" "foobar") ; Passes
```

3.1.44 The Should-Not-String-Not-Equal Macro

The `should-not-string-not-equal` macro is a short-hand method for `(should-not #'string-not-equal ...)`.

Syntax

```
(should-not-string-not-equal &rest arguments)
```

Examples

```
(should-not-string-not-equal "foo" "foo")      ; Passes  
(should-not-string-not-equal "FOO" "foo")      ; Passes  
(should-not-string-not-equal "foo" "foobar") ; Fails
```

3.1.45 The Should-String-LessP Macro

The `should-string-lessp` macro is a short-hand method for `(should #'string-lessp ...)`.

Syntax

```
(should-string-lessp &rest arguments)
```

Examples

```
(should-string-lessp "foo" "f")                ; Fails  
(should-string-lessp "foo" "foo")              ; Fails  
(should-string-lessp "foo" "FOOBAR")          ; Passes  
(should-string-lessp "foo" "foobar")          ; Passes
```

3.1.46 The Should-Not-String-LessP Macro

The `should-not-string-lessp` macro is a short-hand method for `(should-not #'string-lessp ...)`.

Syntax

```
(should-not-string-lessp &rest arguments)
```

Examples

```
(should-not-string-lessp "foo" "f")            ; Passes  
(should-not-string-lessp "foo" "foo")          ; Passes  
(should-not-string-lessp "foo" "FOOBAR")      ; Fails  
(should-not-string-lessp "foo" "foobar")      ; Fails
```

3.1.47 The Should-String-GreaterP Macro

The `should-string-greaterp` macro is a short-hand method for `(should #'string-greaterp ...)`.

Syntax

```
(should-string-greaterp &rest arguments)
```

Examples

```
(should-string-greaterp "foo" "f")      ; Passes
(should-string-greaterp "foo" "foo")    ; Fails
(should-string-greaterp "foo" "FOO")    ; Fails
(should-string-greaterp "foo" "foobar") ; Fails
```

3.1.48 The Should-Not-String-GreaterP Macro

The `should-not-string-greaterp` macro is a short-hand method for `(should-not #'string-greaterp ...)`.

Syntax

```
(should-not-string-greaterp &rest arguments)
```

Examples

```
(should-not-string-greaterp "foo" "f")      ; Fails
(should-not-string-greaterp "foo" "foo")    ; Passes
(should-not-string-greaterp "foo" "FOO")    ; Passes
(should-not-string-greaterp "foo" "foobar") ; Passes
```

3.1.49 The Should-String-Not-GreaterP Macro

The `should-string-not-greaterp` macro is a short-hand method for `(should #'string-not-greaterp ...)`.

Syntax

```
(should-string-not-greaterp &rest arguments)
```

Examples

```
(should-string-not-greaterp "foo" "f")      ; Fails
(should-string-not-greaterp "foo" "foo")    ; Passes
(should-string-not-greaterp "foo" "FOO")    ; Passes
(should-string-not-greaterp "foo" "foobar") ; Passes
```

3.1.50 The Should-Not-String-Not-GreaterP Macro

The `should-string-greaterp` macro is a short-hand method for `(should #'string-greaterp ...)`.

Syntax

```
(should-string-greaterp &rest arguments)
```

Examples

```
(should-string-greaterp "foo" "f")      ; Passes  
(should-string-greaterp "foo" "foo")    ; Fails  
(should-string-greaterp "foo" "FOO")    ; Fails  
(should-string-greaterp "foo" "foobar") ; Fails
```

3.1.51 The Should-String-Not-LessP Macro

The `should-string-not-lessp` macro is a short-hand method for `(should #'string-not-lessp ...)`.

Syntax

```
(should-string-not-lessp &rest arguments)
```

Examples

```
(should-string-not-lessp "foo" "f")      ; Passes  
(should-string-not-lessp "foo" "foo")    ; Passes  
(should-string-not-lessp "foo" "FOOBAR") ; Fails  
(should-string-not-lessp "foo" "foobar") ; Fails
```

3.1.52 The Should-Not-String-Not-LessP Macro

The `should-not-string-not-lessp` macro is a short-hand method for `(should-not #'string-not-lessp ...)`.

Syntax

```
(should-not-string-not-lessp &rest arguments)
```

Examples

```
(should-not-string-not-lessp "foo" "f")      ; Fails  
(should-not-string-not-lessp "foo" "foo")    ; Fails  
(should-not-string-not-lessp "foo" "FOOBAR") ; Passes  
(should-not-string-not-lessp "foo" "foobar") ; Passes
```

Chapter 4

The Sigma/Control Package

The `sigma/control` package contains code for basic program control systems. These are mostly basic macros to add more complicated looping, conditionals, or similar. These are typically extensions to Common Lisp that are inspired by other programming languages. Thanks to the power of Common Lisp and its macro system, we can typically implement most features of any other language with little trouble.

4.1 Macros

4.1.1 The AIf Macro

The `aif` macro is an anaphoric variation of the built-in `if` control structure. This is based on [1, p. 190]. The basic idea is to provide an anaphor (such as pronouns in English) for the conditional so that it can easily be referred to within the body of the conditional expression. The most natural pronoun in the English language for a thing is “it”, so that is what is used. If you need or want to use a different anaphor, use `a?if`. The most common use of `aif` is for when you want to do some additional computation with some time-consuming calculation, but only if it returned successfully.

Syntax

```
(aif conditional t-action &optional nil-action)
```

Examples

```
(aif (big-long-calculation)
     (foo it)
     (format t "The big-long-calculation failed!~%"))
```

This is similar to the following, but with less typing:

```
(let ((it (big-long-calculation)))
  (if it
      (foo it)
      (format t "The big-long-calculation failed!~%")))
```

4.1.2 The A?If Macro

The `a?if` macro is a variation of `aif` that allows for the specification of the anaphor to use, instead of being restricted to just `it`, the default with `aif`. This is most often useful when you need to nest calls to anaphoric macros.

Syntax

```
(a?if anaphor conditional t-action &optional nil-action)
```

Examples

```
(a?if foo 'outer
  (a?if bar 'inner
    '(,foo ,bar))) ; Returns '(outer inner)
```

4.1.3 The AAnd Macro

The `aand` macro is an anaphoric variation of the built-in `and`. This is based on [1, p. 191]. It works in a similar manner to `aif`, defining `it` as the current argument for use in the next argument, reassigning `it` with each argument.

Syntax

```
(aand &rest arguments)
```

Examples

```
(aand 2          ; Sets 'it' to 2.
  (* 3 it)      ; Sets 'it' to 6.
  (* 4 it))     ; Returns 24.
```

4.1.4 The A?And Macro

The `a?and` macro is a variant of `aand` that allows for the specification of the anaphor to use, instead of being restricted to just `it`, the default with `aand`. This is most often useful when you need to nest calls to anaphoric macros.

Examples

```
(a?and foo 12 (* 2 foo) (* 3 foo)) ; Returns 72.
```

```
(a?and foo 1 2 3 'outer
  (a?and bar 4 5 6 'inner '(,foo ,bar))) ; Returns '(outer inner)
```

4.1.5 The ALambda Macro

The `alambda` macro is an anaphoric variant of the built-in `lambda`. This is based on [1, p. 193]. It works in a similar manner to `aif` and `aand`, except it defines `self` instead of `it` as the default anaphor. This is useful so that you can write recursive lambdas.

```
(funcall (alambda (x) ; Simple recursive factorial example.
  (if (<= x 0)
    1
    (* x (self (1- x)))))
10))) ; Calculates 10!, inefficently.
```

4.1.6 The A?Lambda Macro

The `a?lambda` macro is an variant of `alambda` that allows you to specify the anaphor to use, instead of just the default of `it`.

```
(funcall (a?lambda ! (x) ; Simple recursive factorial example.
  (if (<= x 0)
    1
    (* x (! (1- x)))))
10))) ; Calculates 10!, inefficently.
```

4.1.7 The ABlock Macro

The `ablock` macro is an anaphoric variant of the built-in `block`. This is based on [1, p. 193]. It works in a similar manner to `aand`, defining the anaphor `it` for each argument to the block.

Examples

```
(let (w x y z)
  (ablock b
    (setf w 7)
    (setf x (* 2 it)) ; Twice w, 14.
    (setf y (* 3 it)) ; Thrice x, 42.
    (return-from b) ; Leave the block.
    (setf z 123)) ; Never happens.
  (list w x y z)) ; Returns '(7 14 42 nil)
```

4.1.8 The A?Block Macro

The `a?block` macro is an anaphoric variant of `ablock` that allows you to specify the anaphor to use, instead of just the default of `it`.

Examples

```
(let (w x y z)
  (a?block b foo
    (setf w 7)
    (setf x (* 2 foo)) ; Twice w, 14.
    (setf y (* 3 foo)) ; Thrice x, 42.
    (return-from b)    ; Leave the block.
    (setf z 123))      ; Never happens.
  (list w x y z))      ; Returns '(7 14 42 nil)
```

4.1.9 The ACond Macro

The `acond` macro is an anaphoric variant of the built-in `cond`. This is based on [1, p. 191]. It works in a similar manner to `aand`, defining the anaphor `it` for each argument to the conditional.

Examples

```
(let (a b (c 3))
  (acond (a it)          ; No.
        (b it)          ; No.
        (c (* 4 it)))) ; Yes, returns 12 = 4*3, the value of c.
```

4.1.10 The A?Cond Macro

The `a?cond` macro is an anaphoric variant of `acond` that allows you to specify the anaphor to use, instead of just the default of `it`.

Examples

```
(let (a b (c 3))
  (a?cond foo
    (a foo)          ; No.
    (b foo)          ; No.
    (c (* 4 foo)))) ; Yes, returns 12 = 4*3, the value of c.
```

Chapter 5

The Hash Package

5.1 Functions

5.1.1 The IncHash Function

The `IncHash` function will increment the value in *key* of the *hash*, initializing it to 1 if it isn't currently defined.

5.1.2 The DecHash Function

The `DecHash` function will decrement the value in *key* of the *hash*, initializing it to -1 if it isn't currently defined.

Chapter 6

The Numeric Package

6.1 Macros

6.1.1 The DivF Macro

6.1.2 The MultF Macro

6.2 Functions

6.2.1 The Bit? Function

6.2.2 The Choose Function

The *Choose* function computes the binomial coefficient for n and k , typically spoken as n choose k , and usually written mathematically as $\binom{n}{k}$.

6.2.3 The Factorial Function

The *Factorial* function computes $n!$ for positive integers. NB, this isn't intelligent, and uses a loop instead of better approaches.

6.2.4 The Fractional-Part Function**6.2.5 The Fractional-Value Function****6.2.6 The Integer-Range Function****6.2.7 The Nonnegative? Function****6.2.8 The Nonnegative-Integer? Function****6.2.9 The Positive-Integer? Function****6.2.10 The Product Function****6.2.11 The Sum Function****6.2.12 The Unsigned-Integer? Function****6.3 Types****6.3.1 The Nonnegative-Float Type****6.3.2 The Nonnegative-Integer Type****6.3.3 The Positive-Float Type****6.3.4 The Positive-Integer Type**

10.3.2 The Minimum Generic

10.3.3 The Minimum? Generic

10.3.4 The Maximum Generic

Chapter 11

The String Package

The `String` package contains useful tools for working with strings.

11.1 Functions

11.1.1 The Character-Range Function

The `character-range` function returns a list of characters from the *start* to the *end* character. Note that this is returning a list, not a string.

Syntax

`(character-range start end) \implies '(start ... end)`

Arguments and Values

Start The character to start the range with, inclusive.

End The character to end the range with, inclusive.

Examples

```
(character-range #\a #\e)  $\implies$  '(#\a #\b #\c #\d #\e)
(character-range #\e #\a)  $\implies$  '(#\a #\b #\c #\d #\e)
```

11.1.2 The Character-Ranges Function

The `character-ranges` function is a convenience wrapper for `character-range` function, concatenating several calls and making the resultant list contain only unique instances.

Syntax

`(character-ranges start1 end1 ... \implies '(character1 ...)`

Arguments and Values

Start_n The character to start the nth range with, inclusive.

End_n The character to end the nth range with, inclusive.

Examples

`(character-ranges #\a #\c #\x #\z) \implies '(#\a #\b #\c #\x #\y #\z)`
`(character-ranges #\a #\c #\a #\c) \implies '(#\a #\b #\c)`

11.1.3 The Escape-Tildes Function**11.1.4 The Replace-Char Function****11.1.5 The StrCat Function****11.1.6 The StrMult Function****11.1.7 The String-Join Function****11.1.8 The Stringify Function****11.1.9 The To-String Function****11.2 Methods****11.2.1 The Split Methods**

Chapter 12

The Time-Series Package

12.1 Macros

12.1.1 The Snap-Index Macro

12.2 Functions

12.2.1 The Array-Raster-Line Function

12.2.2 The Distance Function

12.2.3 The Norm Function

12.2.4 The Raster-Line Function

12.2.5 The Similar-Points? Function

12.2.6 The Time-Series? Function

12.2.7 The Time-Multiseries? Function

12.2.8 The TMSref Function

12.2.9 The TMS-Dimensions Function

12.2.10 The TMS-Raster-Line Function

12.2.11 The TMS-Values Function

12.3 Types

12.3.1 The Time-Multiseries Type

Chapter 13

The Truth Package

13.1 Functions

13.1.1 The `[?]` Function

13.1.2 The `Toggle` Function

13.2 Generics

13.2.1 The `?` Generic

Chapter 14

The Sigma Package

14.1 Variables

14.1.1 The `*Sigma-Packages*` Variable

14.2 Functions

14.2.1 The `Use-All-Sigma` Function
