The `String` package contains useful tools for working with strings.

### 8.1 Functions

#### 8.1.1 The Character-Range Function

The `character-range` function returns a list of characters from the *start* to the *end* character. Note that this is returning a list, not a string.

##### Syntax

`(character-range start end)`  $\implies$  `'(start ... end)`

##### Arguments and Values

***Start*** The character to start the range with, inclusive.

***End*** The character to end the range with, inclusive.

##### Examples

`(character-range #\a #\z)`  $\implies$  `'(#\a #\b #\c #\d #\e)`
